ON THE OUTSIDE OF THIS ISSUE.—First Page—Agriculture.

The vote in Paris at the recent elections shows that LOUIS NAPOLEON'S popularity is not increasing in the capital. Out of the 356,068 registered electors in the Department of the Seine, 212,899 voted, and 143,170 abstained from voting. Considerable efforts made by the Government to induce its friends to vote, the absence of so many voters from the polls is significant. In fact, the government has polled for its candidates less than one-third of the registered electors in the Department of the Seine.—N. Y. Sun.

The Sun is a moderate yet decided Buchanan paper, and rather affects to be a champion of the rights and moral elevation of the working millions—of white folks—but not caring to cast any great light upon the true position of the self-styled Democracy, who have become mere hewers of wood and drawers of water for the Southern slave drivers.

The Sun is luminous, and sometimes even scorching, upon the despotic and oppressive governments of Europe; but it takes good care not to let its readers know any too much about the peculiar institution, which it was clearly the design of the Kansas-Nebraska bill and of a large portion of the so-called Democracy to smother into Kansas.

The Sun is troubled just now about the French elections. It thinks the vote in the Paris District (Department of the Seine) rather a shabby one,—though, as appears from the returns, about three-fifths of the registered voters participated in the contest,—if contest it may be called, where contest there was little or none.

But we should like to know what the Sun thinks of the late bogus election in Kansas—the election of delegates to the Convention which has been called by the bogus Legislature to frame a State Constitution. The editor is aware, we presume, that of something like Twenty thousand male adults, actually resident in Kansas, only about nine thousand were registered as voters under the bogus law—and that of these 9,000, scarcely more than two thousand have voted at the late election.

"The mountain labored (says Esop) and brought forth a mouse." The mountain of Sham Democracy and Border Ruffianism has been "laboring" in Kansas, and out of 20,000 voting men, selected nine thousand favorites upon whom it conferred the elective franchise—and of these nine thousand, more than three quarters have deliberately absented themselves from the polls!

Will the Sun please to shine forth, and tell us what it thinks of the election, or it in France, but in Kansas? And, while its radiance is beaming, perhaps it will deign to throw a gleam or two upon the moral force and validity which will properly attach to a State constitution gotten up under such circumstances.

Kerosene Oil Company.

This Company, established in 1854 to test the practicability of extracting oils from Coal, have arrived at most satisfactory results in the course of their labors. The works of the Company are established on Newtown Creek, Long Island, in the immediate vicinity of New York City. No less than one million gallons of oil are there manufactured in the course of a year, and the capacity of the factories is continually being extended under the direction of their prosperous managers. Different varieties of this oil are prepared, adapted to the wants of ships, machinery and families, of which we propose to notice the latter at this time. The superiority of the Kerosene illuminating oil has been practically tested with uniformly gratifying results.—With the exception of gas, it is the most convenient and effective means of light that has yet been discovered. Being a pure distillation from coal, its use is attended by no danger of explosion, and no offensive odor of oil, alcohol, turpentine or any other material of composition. Amongst her experiments, one to examine its relative economy with Spermaceti Oil, showed that \$4.10 worth of Kerosene would produce as much light as \$26.47 worth of Spermaceti. In all cases, as compared with all inventions for illumination, a remarkable advantage has been perceived in its favor.

The raw material of this oil is to be found in all parts of our country. Many States are already mining the oil-bearing Canfield coal. Abundance seems promised as a consequence. The company are now appointing local agents in all the principal towns and cities of the Union, whereby a fine opportunity of profit is afforded to business men in every quarter. For pamphlets, descriptive of the matter, and containing most flattering testimonials from parties who have employed the oil for years, application can be made to Messrs. Austin, the general agents, at No. 50 Beaver street, New York.

"A penny for your thoughts, madam," said a gentleman to a pert beauty. "They are not worth a farthing, sir," she replied. "I was thinking of you."

LOCAL NEWS.

We have received through the politeness of Dr. T. W. Wool, of the City Music Store the following new music, published by O. Ditson & Co., Boston:

Scene and air, "Ah, si ben mio—Ah, love, how blest," "Deutro Mira di acerbe lagrime—Witness these tears of agony," "Romanza, Mal reggendo—Wake thee, dearest," are from the opera of "Il Trovatore." This opera seems to be a great favorite with the public at present, and we think deservedly so.

Song, "Addio del passato—Farewell bright visions," from "La Traviata" is very pretty. "Traviata" is becoming a decided rival of "Trovatore" in popularity.

Air "de Basse," from Rossini's "Stabat Mater," transcribed by Henri Herz, is beautiful, but quite difficult.

"I'll pray for thee," from Lucia, with variations, by G. Globe, is good, and easily arranged.

"The Mexican National March," by Herz, we think quite a grand affair.

"Fleecy clouds I see thee flying," arranged for the piano or guitar, by A. Shride.

"The lament of the nightingale," romance for voice, piano and flute obligato, by C. G. Belake. The first we should think much more pleasant with a guitar accompaniment than with a piano. The last song is rather sad; it must be very charming with the flute accompaniment.

Our delight at the recent appropriation for repairs on the wall at Easton's Beach, would be not a little heightened if provision could be made by the same authorities for the restoration of some convenient means of communication with the shore at Conrad's Cave. The approach to this favorite retreat is at present fearfully guarded by a wreck of lumber and plank which formerly constituted a fair apology for stairs, long since converted by the continuous action of wind and weather into a crumbling ruin. This break-neck barrier, through repeated attempts at tinkering on the part of those zealous for the public good, has finally become positively dangerous to any but the most crazy visitor. The probability and the consequences of a headlong descent from the summit of the cliffs into the abyss below, is the alarming impression first received upon an attempt to accomplish the descent in the only possible way afforded to try. We would petition, in the name of numerous admirers of one of the finest of our ocean views, for a more feasible arrangement by which we can all be gratified.

On Saturday afternoon about 3 o'clock, a fishing boat, owned by David Champlin, ran into another boat of about the same size, and stove her side so badly that she sank almost immediately. She was, however, brought to the shore by the timely assistance of several persons who happened to be near. Mr. Champlin was on board at the time of the accident.

The air is now redolent with the scent of newly cut hay, and we learn that mowing machines are very generally in use on this Island. It is with difficulty that mowers can be procured, at even the present exorbitant wages, and these newly invented labor-saving machines, are therefore just now quite invaluable.

The Band arrived at the Bellevue House yesterday morning, as was expected. It consists of the same number of performers as composed it last year, among whom are musicians of the finest merit. Judging from names, this musical troupe has never been surpassed in Newport, even when the Germans, some half a dozen years ago, were in the flower of prosperity.

Board of Aldermen.

JULY 11, 1857.
PRESENT.—His Honor Wm. H. Cranston, Mayor, Messrs. Stevens, Sherman, Hopkins, Freeborn and Weaver.

Resolution read and passed, licensing two carriages to Joseph B. Weaver.

Account of Wm. E. Dennis, as superintendent of Washington Square. Read and referred to Committee on Finance.

An ordinance for the better regulating of hacks and hackney coaches. Read and referred to Committee on Ordinances.

This Board was invited by the Common Council to meet in convention to hear the report of the Committee to whom was referred the communication of His Honor the Mayor, in regard to gas burners being packed.

Adjourned.
IN CONVENTION.—Report of the Committee. Read and received.
Voted to meet on Monday evening at 8 o'clock to hear argument from Council.

After the separation, this Board re-assembled.
Resolved, That the Committee on Gas and Lamps be authorized to contract with the Newport Gas Light Company for lighting streets, provided they can do so upon as favorable terms and upon similar usages in all respects as the city of Providence is lighted. Read and passed.

Petition of Wm. Swan for custody of child. Read and received.

Communication from Beriah Waite in relation to taxes. Read and referred to Assessors of Taxes.

Resolution from Common Council in relation to lighting the streets. Conferred in. Adjourned to Monday, July 13, 1857, at 8 o'clock P. M.

Common Council.

JULY 7, 1857.
PRESENT.—Robt. J. Taylor, Esq., President. Messrs. Randall, Carr, Stevens, Coggeshall, Peckham, Townsend, McGregor, and Hoyt.

This Board invited the Board of Aldermen to meet in Convention to hear the report of the Committee to whom was referred the communication of His Honor the Mayor in regard to gas burners being packed.

Adjourned.
After the separation this Board re-assembled.

An ordinance in regard to hacks and hackney coaches, sent down from Board of Aldermen as referred to Committee on Ordinances. Conferred in by this board.

Account of Wm. E. Dennis, as superintendent of Washington Square, sent down as referred to Committee on Finance. Conferred in by this board.

Resolution in regard to lighting the streets, sent down from Board of Aldermen, as read and passed, and by this Board laid on the table.

Resolved, That the Committee on Gas and Lamps be directed to ascertain upon what terms the city of Providence is lighted and report as soon as practicable. Read and passed.

Communication from Beriah Waite, as referred by Board of Aldermen to assessors of taxes, was conferred in by this Board. Adjourned to Monday, July 13, 1857, at 8 o'clock P. M.

GENERAL NEWS.

HINTS FOR THE HOME CIRCLE.—Solace for the Sick.—Science would lack the grand charm that sheels a halo over its labors, if the gentler sex were not made participants of the benefits it imparts. To that sex the medical discoveries of the distinguished philanthropist, Professor Holloway, have been singularly beneficial. For the complaints peculiar to the female organization, and which are borne with a fortitude rarely exhibited by man, Holloway's Pills have been for twenty years administered with wonderful success. In those crises of woman's life, the dawn of womanhood and the commencement of old age, as well as in the innumerable cases requiring medical assistance which occur between those two important epochs, the mild and restorative action of this great remedy is attested by the strongest vouchers. Nor is the Ointment less highly appreciated as a remedy for the eruptions and other external disfigurements which sometimes cloud the beauty of woman.

It is a terrible thing to see a beloved wife or daughter languishing under the attacks of disease; the lustre fading from her eyes, the rose from her cheek, and premature decrepitude prostrating her energies in the morning or the prime of life. Perhaps the innate sensitiveness and delicacy of her nature forbid her to disclose the cause of the difficulty, or if she seeks medical aid she finds little or no relief from stereotyped prescriptions. Furnished with Holloway's remedies she needs no professional adviser. The directions acquaint her with the manner of their use. In the quiet seclusion of her own chamber she can administer to herself, and soon learn, as millions have already learned, that she has found the true *diver vitæ*. As the glow of health returns to her dimmed eyes, elasticity to her step, and cheerfulness to her heart, she will realize in her own feelings all that has been published of the experience of others, who suffered as she has suffered and have been restored by the same means.

The subject is one on which it is difficult to be explicit, without trenching upon what are called the proprieties of life; but a sense of duty has impelled us to glance at one of the most valuable peculiarities of Holloway's remedies, and we feel assured that our motives will be appreciated.—N. Y. Sunday Times.

A CURIOUS WILL.—The Worcester (Mass.) Transcript gives the substance of the will of the late Jesse W. Goodrich, of that city, well known as a strong advocate of the temperance cause. The document itself covers fifty folio pages, and there is a codicil containing sixty-three double columned pages of printed matter. Among the bequests are a copy of the Holy Bible to each of his brothers, sisters, executors, &c., sixteen in all. Each successive owner of the volumes is to sign a "family testament" which they will neither make, buy, sell, give away or use any kind of alcoholic or intoxicating liquors, either for drinking, culinary, medicinal, surgical or sacramental purposes, nor any tobacco, for the purpose either of chewing, smoking or snuffing; and that by precept and example, and in all other suitable ways, at all times and places, to discountenance all such uses." Other provisions of this curious will are thus given:—

If he orders his executors to subscribe for one copy, for each of themselves and his relatives, of "some good temperance paper, advocating the disuse of tobacco, and legal and moral suasion combined," for the suppression of liquor, thirty copies in all, for twenty-one years.

He then bequeaths \$200 to each of his living sisters, provided they, each of them, within one year, sign the "family and testament pledge," which they will neither make, buy, sell, give away or use any kind of alcoholic or intoxicating liquors, either for drinking, culinary, medicinal, surgical or sacramental purposes, nor any tobacco, for the purpose either of chewing, smoking or snuffing; and that by precept and example, and in all other suitable ways, at all times and places, to discountenance all such uses." Other provisions of this curious will are thus given:—

If he orders his executors to subscribe for one copy, for each of themselves and his relatives, of "some good temperance paper, advocating the disuse of tobacco, and legal and moral suasion combined," for the suppression of liquor, thirty copies in all, for twenty-one years.

He then bequeaths \$200 to each of his living sisters, provided they, each of them, within one year, sign the "family and testament pledge," which they will neither make, buy, sell, give away or use any kind of alcoholic or intoxicating liquors, either for drinking, culinary, medicinal, surgical or sacramental purposes, nor any tobacco, for the purpose either of chewing, smoking or snuffing; and that by precept and example, and in all other suitable ways, at all times and places, to discountenance all such uses." Other provisions of this curious will are thus given:—

He then divides his property, subject to all other bequests, among his relatives, payable every fifth, tenth, fifteenth and twentieth year, provided that at the expiration of each period they shall make affidavit that they have kept the anti-liquor, anti-tobacco pledge in its full extent.

WANTS TO GET DATED BACK.—On a beautiful Sunday afternoon last fall a young couple from an adjoining town came down to our village, stopped at one of the hotels, gave table, through which to experiment upon the hair, and growth will soon appear. Growth does not take place at the end of the hair, as will be seen in persons who have their hair dyed. If you examine gray hair that has been colored for a week, you will find towards the roots that the hair has come out gray, hence it is necessary to have the fluid at the roots of the hair healthy, that the whole hair may be a natural color. Each hair has a root in the skin, and is of itself a hollow, gray tube, through which to experiment upon the hair, and growth will soon appear. Growth does not take place at the end of the hair, as will be seen in persons who have their hair dyed. If you examine gray hair that has been colored for a week, you will find towards the roots that the hair has come out gray, hence it is necessary to have the fluid at the roots of the hair healthy, that the whole hair may be a natural color.
